Flowchart	**04**
Outputs	**05**
QnAs and conclusion	**06**

What is c programming??

objectives and history

Objectives

- Efficient and fast program development
- Portable across multiple platforms
- Direct access to memory and hardware
- Supports structured and modular coding
- Foundation for advanced programming languages

DISCOVER →

History

- - Developed by Dennis Ritchie at Bell Labs in the early 1970s.
- - Created to build the UNIX operating system efficiently.
- - Became one of the most influential languages, shaping many modern programming languages.

DISCOVER →

— Why This Topic??

Brief introduction

The Interactive Riddle Quiz in C is a basic program that asks users riddles and checks their answers. It helps demonstrate simple programming concepts like input, output, and decision-making in a fun way.

We chose an interactive riddle quiz in C to practice core programming concepts like loops, conditions, and user input in an engaging way. It helps improve problem-solving skills and demonstrates how C can be used to build simple interactive programs.

_what's coming up

Problem Statement

To design and develop a computer-based quiz application using C programming language that tests users' knowledge of computer fundamentals and provides instant score evaluation.

MIT WPU PUNE

Algorithm

Step 1: Start

- Begin the program.
- Declare necessary variables.

Step 2: Display Welcome Message

- Show "*Welcome to Computer Fundamentals Quiz*".
- Ask user to enter their name.
- Display quiz instructions.

Step 3: Initialize Score

- Set score = 0.

Step 4: Load Questions

- Store questions, options, correct answers.

Step 5: Display Questions Using Loop

Step 6: Display Final Score

- Show total score & percentage.

Step 7: Display Result Evaluation

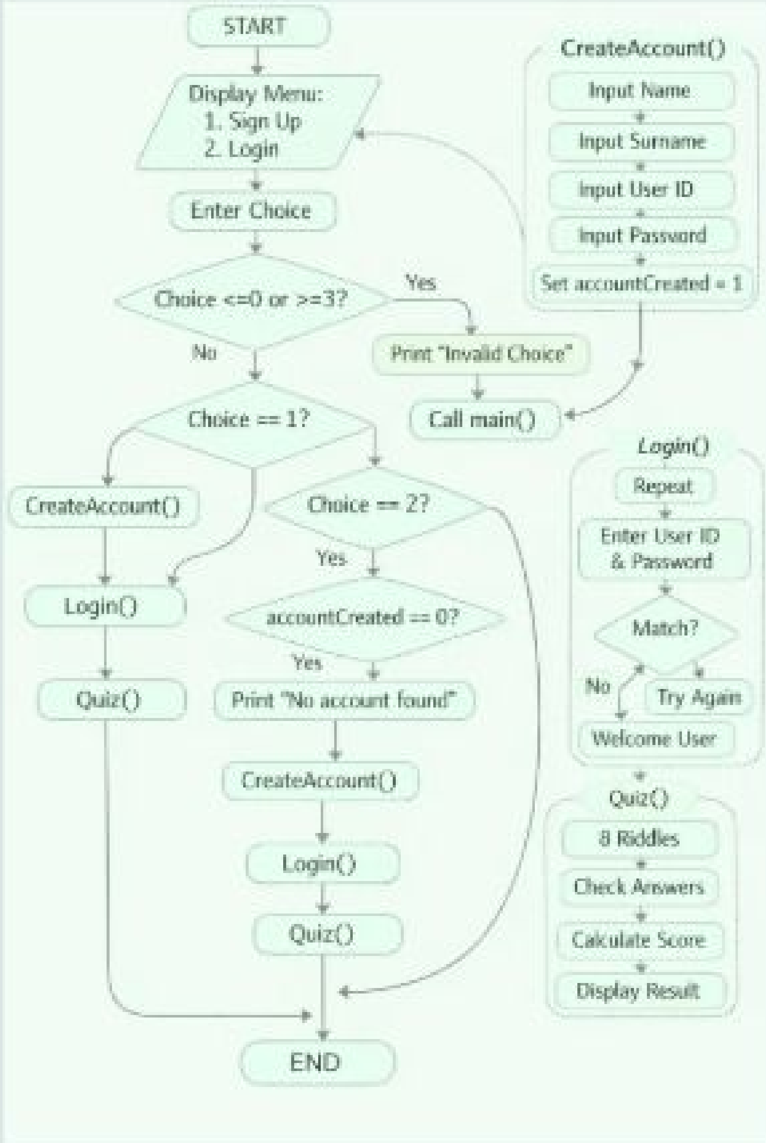
- If percentage ≥ 80: "*Excellent Performance!*"
- Else if percentage ≥ 50: "*Good Job!*"
- Else: "*Needs Improvement!*"

Step 8: End Program

- Show "Thank you for taking the quiz!"
- Stop the program.

Start → Quiz Questions → Evaluate Score → Result → End

FLOWCHART



START
Display Menu:
1. Sign Up
2. Login
Enter Choice
Choice <=0 or >=3?
Yes
No
Print "Invalid Choice"
Call main()
Choice == 1?
CreateAccount()
Login()
Quiz()
Choice == 2?
Yes
accountCreated == 0?
Yes
Print "No account found"
CreateAccount()

Finish up your riddles

riddle_1  I get shorter as I get older, yet I never mo
ve.
1:program  2:Memory  3:Variable name  4:Stack
2
Right answer

riddle_2  I always tell the truth, but I am not always
 correct.
1:Compiler  2:Algorithm  3:Programmer  4:Debugger
4
Right answer

riddle_3  I can be full, empty, or overflow.
1:Stack  2:Queue  3:Buffer  4:Register
3
Right answer

riddle_4  The more you optimize me, the slower I somet
imes become.
1:Code  2:Cache  3:Network  4:Database
1
Right answer
```

OUTPUTS-

```
riddle_5  I start with nothing, end with everything.
1:Binary Search  2:If-Else  3:OS  4:Compiler
4
Wrong answer

riddle_6  I exist everywhere, yet I do nothing.
1:Comment  2:Loop  3:Function  4:Class
1
Right answer

riddle_7  I can run forever if you forget me once.
1:Recursion  2:Infinite loop  3:Deadlock  4:Thread
2
Right answer

riddle_8  I make programs faster without changing outp
ut.
1:Refactoring  2:Optimization  3:Multithreading  4:Cac
hing
2
Right answer

QUIZ OVER
Your Score: 70 / 80
GOOD JOB
```

MIT WPU PUNE

CONCLUSION

This project highlights how C programming can be used to build real-world applications like a quiz system. It demonstrates structured programming and efficient logic implementation. The system can be further enhanced by adding features such as a timer, database storage, and difficulty levels.

QnAs

Thank you for exploring our Computer Quiz System built using C programming.

This project strengthened our understanding of structured programming, logical thinking, and real-world application development.

We welcome your questions and feedback.
